#### MILLED WOOD

Wastes and residues resulting from primary and secondary woodworking manufacturing activities. The moisture content is variable. The specific characteristics of these materials vary depending on the specie of wood. The composition is variable and contains no more than 5% by volume of contaminants such as sand, dirt, particle board, plywood, fiber board, cardboard, paper, glues, sealers, paints, and solvents.

## HARVESTED WOOD WASTE

Waste and residues resulting from land clearing, silviculture, and forest management activities. The moisture content is variable. The specific characteristics of the materials vary depending on the specie of wood. The composition is variable and contains no more than 5% by volume of contaminants such as sand, dirt, orchard, nursery, and agricultural wastes.

## PAPER AND ALLIED PRODUCT MANUFACTURING

Wastes and residues resulting from the manufacture of paper, conversion of paper and paperboard, and the manufacture of paperboard boxes and containers.

The moisture content is variable. The specific characteristics of these materials are variable and may contain as much as 50% by weight of inorganic fillers. The composition of these materials is variable and contains no more than 5% by volume of contaminants such as inks, glues, binders, pigments, and oils.

#### TREATED WOOD

Wastes and residues resulting from the manufacturing of wood that is treated with various chemicals for the purpose of preserving, protecting, sealing, or otherwise extending the structural properties and integrity of the wood. The moisture content is variable. The composition is variable and contains such contaminants as organic and inorganic chemicals, metals, oils, paints, solvents, and pigments.

## **CONSTRUCTION WASTES**

Wastes and residues resulting from the construction, remodeling and repairing of individual residences, commercial buildings, and other structures. The composition is variable and generally includes pallets, paper, cardboard, forming and framing lumber, treated lumber, shingles, tar based products, plastics, plaster, wallboard, insulation materials, plumbing, heating, and electrical parts.

# **DEMOLITION WASTES**

Wastes and residues are generally the same as construction wastes but may include broken glass, painted or contaminated lumber, chemically treated lumber, asbestos, white goods, and reinforcing steel.
